

# CLS COMPRESSION LEASING SERVICES

PROVIDING THE WORLD WITH HIGH PRESSURE BOOSTERS & COMPRESSORS

In 1998, Ben and Daron Gruner set out to reinvent the family's compressor business. Compression Leasing Services, Inc.(CLS) began by manufacturing unique and specialized compressors, and other oilfield and construction equipment one at a time. We quickly realized that there was a unique place in the compressor market that greatly needed more attention. This very small business grew rapidly because of superior quality, innovative products, customer focus, and superior customer service. Today, CLS is the World Leader in the manufacturing, sales, and rentals of High Pressure Booster Compressors and Rotary Screw Compressor Products, with compressors sold in at least 15 different countries worldwide.

Our manufacturing facilities in Casper, Wyoming house some of the most state of the art manufacturing equipment and processes used in the compressor

fabrication business. Our team of quality Engineers, Draftsmen, Welders, Assembly Personnel, and Sales and Service people, make sure that our customers will have a positive and profitable experience when using our products to accomplish their tasks.

We are proud to introduce another new, innovative compressor product: the CLS-GPSC-600 a gasoline-driven, portable air compressor. This compressor was specifically built to address the issues that customers' will encounter with the new diesel emissions process on small compression equipment. This unit also introduces many new features, and many operation advantages that are not normally offered by the other suppliers of portable compressors. We look forward to showing what this product can do, and learning about your needs for quality compressor products.
